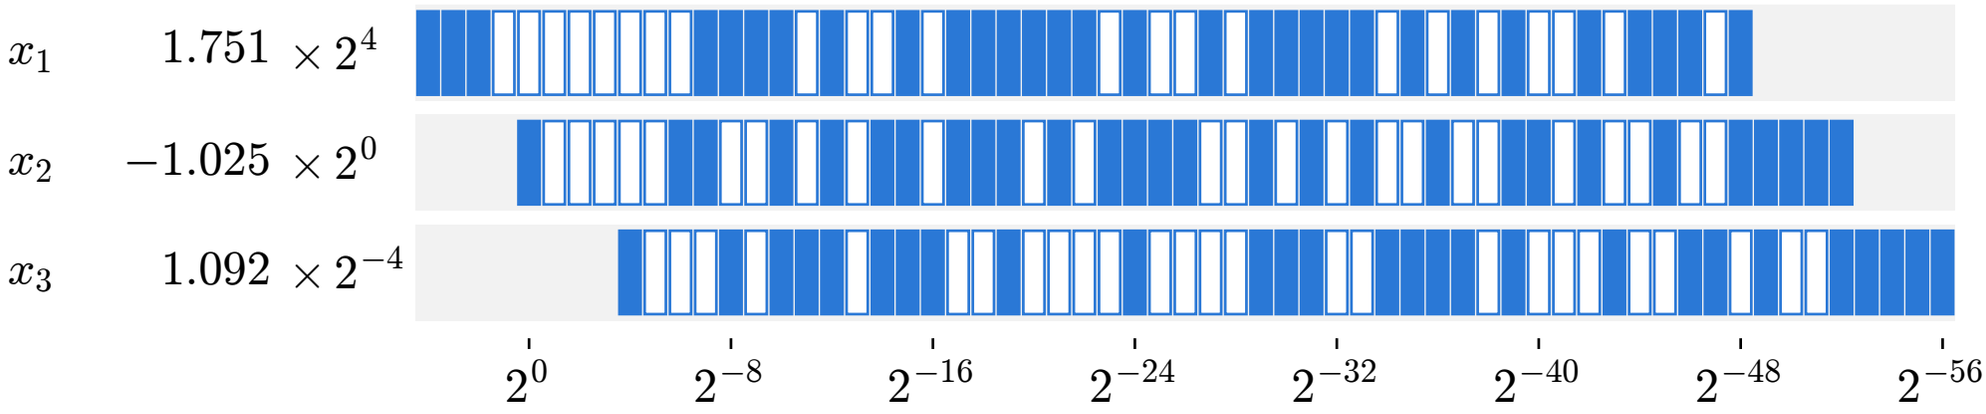
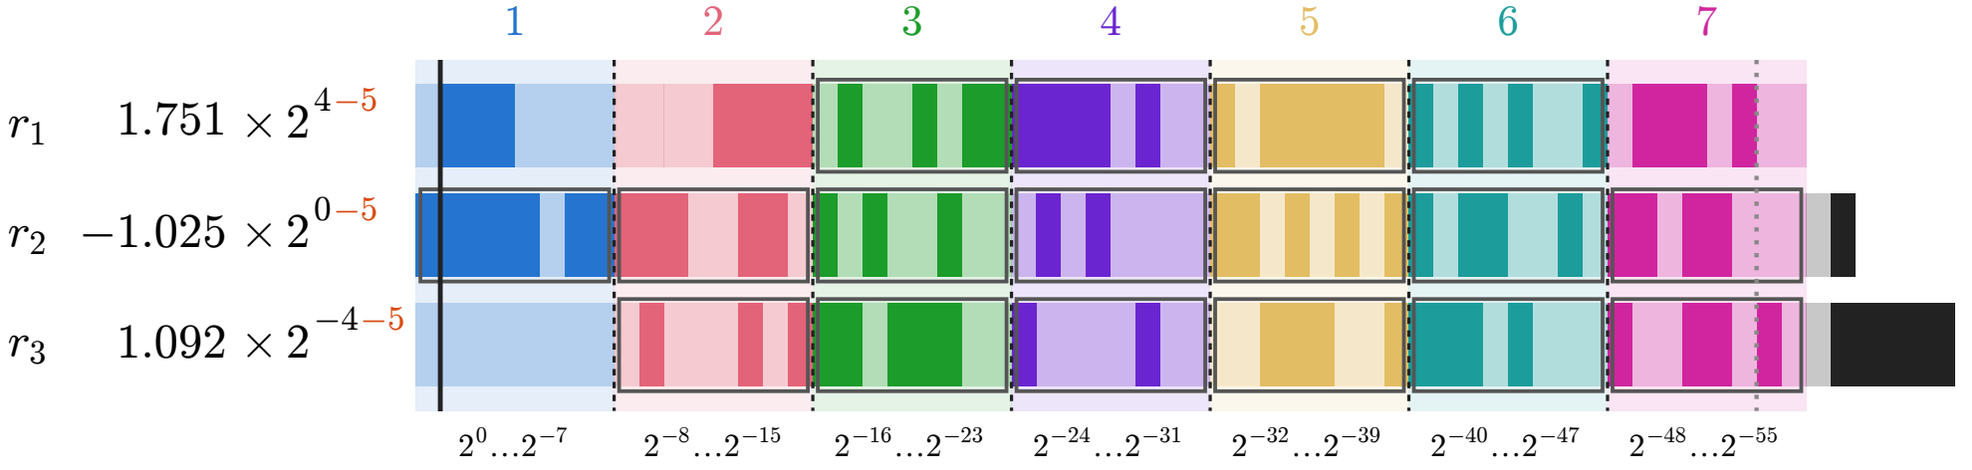
(a) x



(b) $r_j = x_j \,/\, e$, with $e = 2^{5}$, so the largest leading bit lands at 2^{-1}

ESC = 0; boxed: slices re-encoded in two's complement when stored as signed int8



(c) INT8 slices, slice k weighted $2^{-(8k-1)}$

$$
\begin{aligned}
&2^{-7}\,\underset{x^{(1)}}{\left(2^{5}\;112\;-4\;0\right)} + 2^{-15}\,\underset{x^{(2)}}{\left(2^{5}\;15\;-25\;70\right)} + 2^{-23}\,\underset{x^{(3)}}{\left(2^{5}\;76\;-92\;-35\right)} \\
&+ 2^{-31}\,\underset{x^{(4)}}{\left(2^{5}\;-11\;81\;-124\right)} + 2^{-39}\,\underset{x^{(5)}}{\left(2^{5}\;-65\;-42\;58\right)} + 2^{-47}\,\underset{x^{(6)}}{\left(2^{5}\;-87\;-77\;-23\right)} \\
&+ 2^{-55}\,\underset{x^{(7)}}{\left(2^{5}\;116\;-40\;-102\right)}
\end{aligned}
$$
