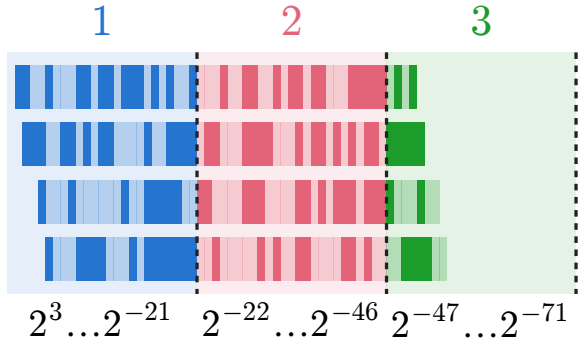
Splitting an n-element vector into α-bit slices ($n = 4$, $\alpha = 25$)

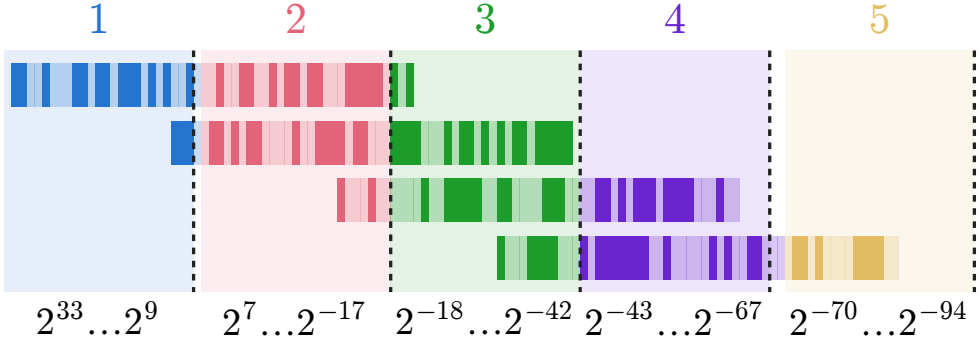
(a) span = 4

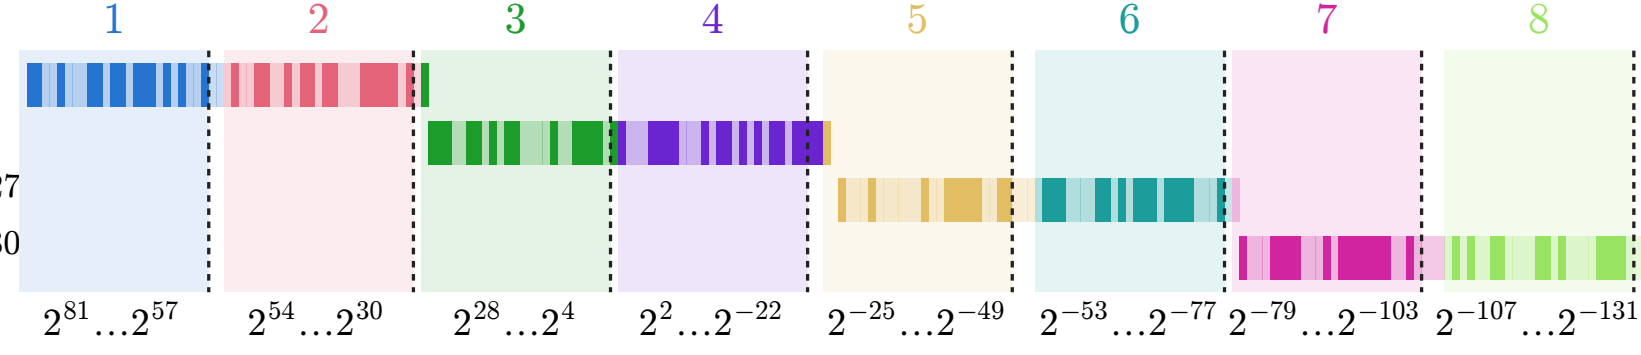
$x_1 \quad 1.569 \times 2^{2}$
$x_2 \quad 1.802 \times 2^{1}$
$x_3 \quad 1.063 \times 2^{-1}$
$x_4 \quad 1.118 \times 2^{-2}$



(b) span = 64

$x_1 \quad 1.569 \times 2^{32}$
$x_2 \quad 1.802 \times 2^{11}$
$x_3 \quad 1.063 \times 2^{-11}$
$x_4 \quad 1.118 \times 2^{-32}$



(c) span = 160


$x_1 \quad 1.569 \times 2^{80}$
$x_2 \quad 1.802 \times 2^{27}$
$x_3 \quad 1.063 \times 2^{-27}$
$x_4 \quad 1.118 \times 2^{-80}$
